

SportsBuddy website:

Problem statement: people often have interest in sports but when they travel to other place due various reason they are unable to connect with other people who have similar interest or remain aware of local event(example : a person live in Delhi, but want to travel in Bangalore, But in bangalore she might not know other people or places where local event will be conducted). sportBuddy will solve this problem by facilitating the user by showing connections on their feed once they register with their info like current city, email etc.. it will show local events on their feed.

Features:

- Login/signup(normal user)
- Post event
- Send connection requests/accept connection
- Get choice based feed about local sports, friend suggestion based on current city
- Chat with connected people
- Admin dashboard to approve registration of people, to delete event, delete user, add location, add event

Tech:

Frontend: react, bootstrap

Backend : express

Database : mongodb
